Free .Hangzhou-Zhoushan railway The Hangzhou-Zhoushan railway, also known as the Hongqiao-Zhoushan railway (), is a railway line in eastern China from Panyu (where it connects with the Tianjin-Pukou railway) to Zhoushan Island. It runs through Guangdong, Jiangxi and Zhejiang provinces as well as being entirely within the Yangtze River Delta. History Construction of the line started on April 7, 2007, and the first section to Jiulongpo (now Taiwan) opened in August 2008. On March 29, 2011 the line from Taipei to Zhoushan opened, opening the line in a 28-hour workday. Rail connectivity to Jiangshan Port and Inner Yangtze Cruise is only available after Zhoushan Port opens and Ferry to Shandong is ceased at present. Cyclohexylalanine: A target in the treatment of phenylketonuria. Phenylketonuria (PKU) is the most common inborn error of amino acid metabolism, affecting approximately 1 in 12,000 to 1 in 17,000 births. A pharmacological approach is needed to prevent mental retardation and other related complications such as epilepsy, behavioral disorders and macrocephaly in patients with this disorder.

The current standard of care for PKU is a low-phenylalanine diet supplemented with an intrauterine treatment with the amino acid, 6R-tetrahydrobiopterin (BH4). The BH4 therapeutic regimen provides adequate amounts of BH4 to the brain to provide adequate levels of tetrahydrobiopterin, a cofactor required for tyrosine hydroxylation and neurotransmitter synthesis. However, a number of adverse events, including gastrointestinal disorders, need to be taken into consideration when providing this therapy. With the development of new approaches to dietary restriction in PKU treatment, the use of BH4 supplementation, including the frequent treatments that were originally given to the newborn, could be reduced. A novel approach to treatment for PKU patients is the introduction
